

Photocatalytic Cleaning Agent

Cleaning

Disinfection

Deodorization

You can do it at the same time!

NANOBEST

ECO-5

Strongly alkaline: pH13
5L/10L/20L

Tackles stubborn oil-based stains

Made from a mixture of photocatalysts and natural oils, it releases powerful active oxygen species. By decomposing into carbon dioxide, water, and oxygen, it facilitates the smooth removal of dirt and grease. After cleaning, only trace amounts of titanium dioxide and inorganic ions remain, making it safe, harmless, gentle on plants, and an environmentally friendly, low-cost cleaner. Furthermore, the wastewater naturally decomposes within 2 to 3 weeks.

The wastewater after cleaning also breaks down grease in the grease trap and drain.

Save time and money with ECO-5

No need to rinse with large amounts of water

Since no surfactants are used, it does not foam, eliminating the need to rinse away foam with large amounts of water.

**Reduce
work
time**

**Break
down
oil !!**

Kitchen, floor

Cleaning

Disinfection

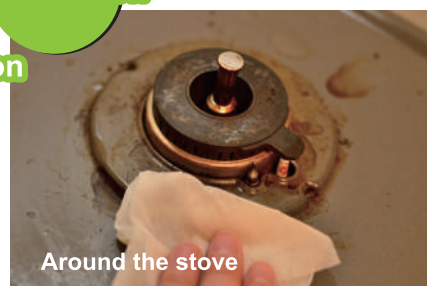

Floors in processing plants, etc.

Ventilation fan

Deodorization

Around the stove

Decomposes exhaust gases and wastewater contaminants

Air conditioner outdoor unit
